## DEVELOPER EXPERIENCE

### LocalToMe, *Front-End Developer*

[Live Preview](#), [Github](#)

LocalToMe is a web application that locates and provides low-income families/individuals with free & accessible food resources near their area within their budgets.

**Tech Stack:** Next JS, React, Mapbox, Firebase, Styled-components, Storybook,

September 2022 - December 2022

- Scripted, organized, and wrote documentation in storybook for over 20 reusable components that were used throughout the project.
- Closely worked with back-end developers to ensure front-end components connected to the database.
- Communicated with designers consistently to ensure the UI/UX was up to standards.
- Worked in an agile environment, where we would have weekly stand ups and sprint reviews and plannings.

### RainCheck, *Front-End Developer*

[Live Preview](#), [Github](#)

RainCheck is an interactive map web application providing insights on the Vancouver housing market and lets you know how long it takes you to afford one. Created during BCIT's QDS 2023 Hackathon.

**Tech Stack:** Next JS, React, Axios, Mapbox, Styled-components, TailwindCSS.

(Note: Please allow 10-20 seconds for the mainpage to load up, as we are calling from the API and it will take some time).

January 2023

- Scripted and styled components that would later be connected to the apis we called.
- Assisted in the fetching of data from the API and displaying that information onto our webapplication.

## SKILLS

### Frameworks and Front-End
